Pages: 336

Publication: year 2025

Artificial Intelligence and Care of Our Common Home is a joint research project between the Strategic Alliance of Catholic Research Universities (SACRU) and the Centesimus Annus Pro Pontifice Foundation (CAPPF). The research aims at analyzing the development and application of Artificial Intelligence in the fields of industry, finance, education, and communication from a multidisciplinary and international perspective. Grounded in the Social Doctrine of the Church, it seeks to identify the risks, abuses, and inequalities stemming from the unethical or unregulated production and use of AI. At the same time, it aims to explore the conditions necessary for ethically guided innovation that places technology at the service of the common good.
